Trust Plan · Draft · November 2026 · Saintilco Consulting

SCOPE

Agent	Codes supplier invoices
System	Workday Financials
Kind	Third-party, connected to our system
Process	Supplier invoices
Stage	Pilot in a test environment
Most it can do	Submit for approval
Works like	AP specialist
Person reviews above	$10,000
Owner	AP manager
Pause error rate	5% wrong results in a month
Overall	× **NOT READY TO ACT YET**

FIX BEFORE GO-LIVE

- **Must:** *Find out first:* Compare the agent's security groups to the human role domain by domain, and remove every extra domain.
- **Must:** Write and test a same-day pause, a manual fallback and a way to reverse the agent's actions.
- Merge duplicate suppliers or customers and inactivate unused accounts and worktags before go-live.
- Write the agent's rules in one place and add those rules to the change checklist for account posting rules or worktag rules.
- Give the agent its own account and write down every system and data set it can reach.
- Confirm the agent shows as the actor in the process history, with the approver, and test it on one real action.
- Write down the review sample, the reviewer and the schedule for turning corrections into rules.
- Track errors monthly and re-run this check after every access change and each Workday release.

ACCEPTANCE TESTS, RUN BEFORE GO-LIVE

1. Run the agent on 50 past items with known answers, in a test environment. Passes if at least 95% are right.
2. Send one item over $10,000. Business process routing must send it to a person.
3. Send one item for a brand-new supplier or customer. It must reach a person.
4. From the agent's account, try to approve, post or pay. Workday must refuse.
5. Compare the agent's security groups to AP specialist, domain by domain. There must be no extra domain.
6. Pick one action the agent took and trace it in the process history to the request and the person who approved it.
7. Pause the agent, handle one day's work by hand, reverse one agent action, then switch it back on.

PAUSE RULE

Anyone may flag a wrong result. AP manager pauses the agent the same day if wrong results pass 5% in a month, and the team works by hand until the cause is fixed.

YOUR TEAM OWNS

- The agent, its rules and its owner, AP manager
- Its security groups and any setup changes in your system
- The review sample
- The pause decision
- Final sign-off

KEEP ON FILE

- The signed plan
- The results of each acceptance test, with the date and who ran it
- The date you re-run this check, after any access change or each Workday release

REVIEW

Error rate checked monthly. Re-run this check after any access change, each Workday release, or a change to the agent.
